Supplementary Figure S1. SDS, nystatin, amphotericin B, and ODDC are not substrates of Pdr5p, Snq2p, and Yor1p. Growth inhibition zones measured in a disc diffusion assay using YPD top agar in variously pump-expressing strains (AD12, AD13, AD23, and US 50-18C) and negative control AD1-3 exposed to: (A) 1 M SDS, (B) 20 mM nystatin, (C) 10 mM amphotericin B in water, and (D) 15 mM ODDC.
